

Missing Something?

We all get that feeling that we have forgotten something from time to time.

Two of the most common and important items when installing fire systems is the isolator switch and test smoke.

BF421R mains voltage safety isolator switch

The BF421R is a mains voltage safety isolator switch. It provides a secure method for safely isolating the mains supply to fire control and indicating equipment.

It comes with an onboard fuse and switches both the live and neutral supply. The added security of the keyswitch ensures it can only be used by an authorised person.

Aero 300 smoke detector tester

The Aero 300 is a convenient 150ml hand-held aerosol for the testing of ionisation and optical smoke detectors within reach.

Simply point at the detector 30cm away and spray!

- **Non-Flammable**
- **Ozone Friendly**
- **Oil Free**
